1 Data Structures

Here are the data structures with brief descriptions:

2 File List

Here is a list of all files with brief descriptions:

3 PJFP Class Reference

Public Member Functions

- __construct ($album_id, $auth_key="", $conf=NULL)
- set_conf ($key, $value)
- get_data ($type=self::NUMERIC)
- get_config ($index)

Data Fields

- const NUMERIC = 0x01
- const ASSOC = 0x02
- const BOTH = 0x03

3.1 Detailed Description

Picasa JSON Feed Parser (PJFP) Class This class parses a given Picasa RSS feed in JSON format. It will get image URLs, width, height, and captions for a particular album.

Author

GneatGeek [Rory Hardy]

3.2 Constructor & Destructor Documentation

3.2.1 __construct (*$album_id,* *$auth_key =* " ", *$conf =* NULL)

Constructor

Parameters

string	$album_id	- Picasa RSS album ID. Pass as a string on 32 bit systems to avoid potential issues.
string	$auth_key	- Key that picasa uses for limited/private galleries.
array	$conf	- Associative array used to override default settings in config.inc. See PJFP_-config.php for parameters

3.3 Member Function Documentation

3.3.1 get_config ($index)

Getter method to access the config array.

Parameters

string	$index	- The config array index to return.

Returns

mixed

3.3.2 get_data ($type = self::NUMERIC)

Retrieve the 2D array of data created by json() Format is array(URL, width, height, caption) Default is numeric indicies. Calls json() if data array is not yet built.

Parameters

int	$type	- What type of array to request. PJFP::ASSOC for associative, PJFP::BOTH for mixed

Returns

array

3.3.3 set_conf ($key, $value) [final]

Sets a config variable

Parameters

string	$key	- The key of the config array to set
mixed	$value	- The config value to use

3.4 Field Documentation

3.4.1 const ASSOC = 0x02

Class constant for requesting an associative array as opposed to numeric.

3.4.2 const BOTH = 0x03

Class constant for requesting an associative array merged with a numeric array. NUMERIC = 0x01, ASSOC = 0x02 -$>$ ASSOC|NUMERIC = 0x03

3.4.3 const NUMERIC = 0x01

Class constant for requesting an numeric array. This is selected by default.

The documentation for this class was generated from the following file:

- PJFP.php

4 PJFP.php File Reference

Data Structures

- class PJFP
